DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claim 1, is allowed. The prior art discloses a transceiver for bidirectional frequency division multiplexed transmission comprising: transmission means for transmitting data in at least one transmission frequency range; receiving means for receiving data in at least one receiving frequency range; and a coupling impedance for connecting the transmission means and the receiving means to a transmission medium.

The prior art however fails to disclose a transmission means which has a voltage source output and the magnitude of the coupling impedance in the transmission frequency range is smaller than the magnitude of the coupling impedance in the receiving frequency range or a transmission means which has a current source output and the magnitude of the coupling impedance in the transmission frequency range is higher than the magnitude of the coupling impedance in the receiving frequency range.

Claim 11, is allowed. The prior art discloses a communication system comprising two or more transceivers with transmission means, in which the transmitting frequency range of a first transceiver corresponding to the receiving frequency range of a second

transceiver is above a threshold frequency and the receiving frequency range of the first transceiver corresponding to the transmitting frequency range of the second transceiver is below the threshold frequency.

The prior art however fails to disclose a first coupling impedance of a first transceiver comprising a high pass filter characteristic and a second coupling impedance of the second transceiver comprising a low pass filter characteristic **if the transmissions means of the transceivers have a voltage source outputs**, and the first coupling impedance of the first transceiver comprising a low pass filter characteristic and the second coupling impedance of the second transceiver comprising a high pass filter characteristic **if the transmissions means of the transceivers have a current source outputs**.
